

# DAYCO® TIMING BELTS

Dayco® timing belts are designed with a molded tooth surface, wear-resistant fabric and a high tensile strength cord. This provides consistent slip-proof power transfer and a high resistance to oil and engine heat. This specific belt is for applications with standard temperature and load with a reinforced square tooth profile for more demanding drives. Dayco® timing belts are designed using materials and workmanship that meet all OEM performance requirements.

## Self-Lubricating Fabric

Provides exceptional resistance to abrasion; resulting in extended pulley and belt life

## Molded Cog Design

Runs quieter and is more economical

## High Nodulus Glass Fiber Cord

Delivers precise length stability to keep the engine running smoothly
